

# Warehousing Audits:

Understand all the elements at work in your warehouse

## Warehousing Audit

While the focus of our warehousing services approach is on doing (not just recommending), we're often called upon to help our clients assess their current warehousing position. They want to know:

- What is my current customer service level?
- What and where are my hidden costs?
- What are the risks in my current warehouse practices?
- Where are staff more critical than process?
- Do we have enough staff and equipment or too much?
- Do we have physical security of our products?
- How should we manage our current layout?
- Where too from here?

For some clients, a warehousing audit is required by corporate or regulatory bodies. For others, it forms part of a wider long-term strategy. And for some, it's just about peace of mind. Whatever your reasons, there are times when you simply must know where you currently are, before deciding where you're headed.

STL Warehousing warehouse audits provides a wide range of reviews to customers from general warehousing audits to full GWP audits for companies involved in pharmaceuticals, life sciences and bio-tech products:

### Within these audits we focus on:

- Receipt of goods into a warehouse
- Quality control
- Status change management
- Storage
- Order receipt
- Order picking and packing
- Order consolidation for dispatch
- Serial / batch tracking

# Warehousing Audits:

Understand all the elements at work in your warehouse
